## **BTS Software Solutions Partners with the University of Rio Grande to Change the Tech Landscape in Ohio**

*Software company initiates academic program to provide students with education and technical training for the national security and intelligence sectors.*

**Gallipolis, OH**— Today, [BTS™ Software Solutions](#) announced a partnership with the [University of Rio Grande](#) to implement the Software Engineering for National Security Enterprise (RIO SENSE) program in Ohio. Starting fall 2012, the program will build upon the current computer science and technology curriculum to help students gain skills that will help them launch successful careers.

“There are so few opportunities for students in Ohio to learn about the skills necessary to succeed in the national security and intelligence fields. I know because I was a kid that grew up here,” said BTS Software Solutions President Sean Lane. “The RIO SENSE program provides unique technical training that can launch a student right into a career in the national security sector.”

Utilizing the RIO SENSE curriculum, select students will receive instruction and hands on learning in intelligence community fundamentals, collection, analysis, & dissemination of data, and software development. Courses will be focused on Unix/Linux environments, Python & Java programming, website design, database administration, and package management.

“We’re thrilled to partner with BTS Software Solutions to bring an interactive education in intelligence technologies to Ohio,” said President of the University of Rio Grande and Rio Grande Community College, Barbara Gellman-Danley. “The program allows our students to not only learn about these cutting edge concepts, but also gain access to a growth industry that is hiring and improving the local economy. In addition, the program reinforces the goals and objectives of Ohio’s leadership and our 10-year strategic plan for the University and Community College, also known as the *Decade of Dreams*.”

To help the program’s students gain real work experience, BTS Software Solutions plans to offer summer internships at their Gallipolis office and provide security clearance processing. Jobs at the company will also be available to top RIO SENSE students upon graduation.

“We are always looking for outstanding software engineers to support our work in the intelligence sector and think this is a great opportunity to train the next generation of great technologists,” said BTS Software Solutions Executive Vice President Stu Gott.

Future plans to expand upon the partnership between BTS Software Solutions and the University of Rio Grande include establishing a Multi-Intelligence Integration Lab Technology Education Center (MIL-TEC), which will provide students with opportunities to incubate and prototype their ideas.
